

RYAN WILSON

Security Engineer

Des Moines, IA (open to remote)

ryan@ryanwilson.io | ryanwilson.io | github.com/rywils | linkedin.com/in/rywils

SUMMARY

Security-focused engineer with experience across networking, systems administration, and infrastructure operations. Specialized in enterprise networking, Linux systems, and cloud environments, with hands-on experience in a variety of technologies including FortiGate NGFW, Cisco Firepower, CrowdStrike Falcon, and Snort. Currently pursuing a B.S. in Cybersecurity and Information Assurance. Focused on security engineering, infrastructure security, and AI-driven security systems.

TECHNICAL SKILLS

Security:

Vulnerability assessment, threat detection, incident response, network segmentation, Fortinet NGFW, Cisco Firepower, Snort, CrowdStrike Falcon, Splunk, Wireshark, Nmap, Burp Suite

Networking:

TCP/IP, VLANs, VPNs, routing & switching, DNS, DHCP, Cisco, Juniper, Aruba, pfSense, Riverbed, Talari SD-WAN

Systems:

Linux administration, Windows Server, Active Directory, system hardening, VMware, Proxmox, Hyper-V, Ubuntu, RHEL, Debian, Kali, AlmaLinux, SELinux

Cloud / Infrastructure:

AWS, Azure, GCP, Terraform, Ansible, Docker, Kubernetes, VPC networking, WAF, CloudFront/CDN, CloudWatch

Development:

JavaScript/TypeScript, Python, Go, C, C#, PHP, Node.js, React, REST APIs, GraphQL, Supabase, PostgreSQL, MySQL, MariaDB

PROFESSIONAL EXPERIENCE

Senior Infrastructure Engineer

AGIS Global | May 2026 – Present

- Designed and built the entire infrastructure stack from scratch at a pre-launch startup – spanning platform, backend, DevOps, SRE, and security simultaneously
- Architected and deployed a multi-node bare-metal NVIDIA DGX Spark GPU cluster with a dedicated 400G RoCE RDMA fabric via Arista, purpose-built for large-scale AI inference
- Architected datacenter migration and expansion from on-premise infrastructure to co-location
- Designed full enterprise network topology across Juniper BGP border routing and perimeter firewall, and Cisco Nexus spine/leaf switching. Production-grade from day one
- Built a custom Rust based orchestration layer for zero-copy IPC, eliminating Python GIL bottlenecks for high-throughput AI request handling
- Implemented Infrastructure as Code using Ansible for bare-metal provisioning and Terraform for cloud failover on AWS
- Deployed self-hosted observability stack via Grafana, Prometheus, Loki, and Jaeger alongside CI/CD via self-hosted GitLab
- Defined and enforced security posture across IAM, endpoint detection, and secret management
- Onboarded and led incoming engineering hires, establishing team workflows, repository standards, security protocols, and access controls as the organization scaled

Freelance Developer

ryanwilson.io | Nov 2024 - Present

- Develop web applications using React and Next.js, along with WordPress sites for small business clients
- Project specific, full-stack applications using Next.js, Vue/Nuxt, SvelteKit, and Laravel
- Build backend APIs and services using Node.js, Express, GraphQL, tRPC, and Supabase
- Deploy applications across AWS, Vercel, Netlify, Linode, and DigitalOcean
- Implement CI/CD pipelines, CDN distribution, and Redis caching with Upstash

- Design application data layers using PostgreSQL, SQLite, MongoDB, and MariaDB
- Manage full project lifecycle including client onboarding, architecture, deployment, and support

Systems Engineer

DH Pace | Jul 2023 - Aug 2024

- Administered VMware vSphere infrastructure (vCenter, ESXi) across hybrid environments
- Managed AWS workloads and Cisco Meraki cloud-managed networking
- Deployed and maintained Fortinet NGFW policies and site-to-site VPN infrastructure
- Supported Cisco and Aruba networking equipment across enterprise locations
- Implemented CrowdStrike Falcon endpoint protection across enterprise endpoints

Freelance Consultant

RYIO Consulting | Mar 2022 - Jun 2023

- Provided IT consulting and infrastructure support for small and mid-sized businesses
- Managed Windows Server and Linux environments including Active Directory and Group Policy
- Supported AWS and Microsoft Azure infrastructure deployments
- Performed infrastructure troubleshooting, system upgrades, and maintenance
- Assisted clients with network configuration, system administration, and operational support

Systems Administrator

BlueAlly | Oct 2019 - Dec 2021

- Managed Fortinet Security Fabric deployments, Cisco ASA, and Cisco Firepower firewalls
- Implemented Riverbed SteelHead WAN optimization appliances
- Deployed Talari SD-WAN solutions to improve connectivity across distributed sites
- Administered Linux servers, including package management, services, and automation scripts
- Maintained strict SLA requirements across managed enterprise environments

Help Desk Specialist (Contract)

Casey's General Stores | Jul 2019 - Oct 2019

- Supported rollout of Casey's online ordering platform across retail locations
- Assisted with incident triage, ticket resolution, and remote troubleshooting
- Provided technical support for store systems and retail infrastructure
- Worked with deployment teams during rollout of new ordering systems

Datacenter Technician (Contract)

Microsoft | Nov 2017 - Dec 2018

- Diagnosed and triaged server and hardware failures across datacenter clusters
- Performed Cisco Nexus switch configuration and network troubleshooting
- Assisted with rack deployments and server cluster provisioning
- Maintained compliance with strict Microsoft SLAs for outages and hardware failures

SECURITY PROJECTS

Kitscan - Web application for code analysis

Personal Project | November 2025 - April 2026

- Built a local static analysis and dependency vulnerability scanning tool for identifying security issues in source code
- Implemented multi-phase scanning (baseline + deep analysis) to refine findings and reduce false positives
- Integrated dependency vulnerability lookups using OSV.dev to detect known CVEs in project dependencies
- Developed rule-based detection for insecure coding patterns, exposed secrets, and misconfigurations
- Generated structured findings with severity, file location, and remediation guidance aligned to OWASP and CWE standards

BitSentry – Security Assessment Platform

Personal Project | 2025 - Present

- Released a modular CLI-based security assessment suite for attack-surface discovery, vulnerability scanning, and reporting workflows

- Built and integrated multiple products including BitScope (asset discovery), BitProbe (web vulnerability scanning), BitReport (report aggregation), and BitAI (verification tooling)
- Developed plugin-based scanning pipelines for web application analysis, TLS misconfiguration detection, exposed service discovery, and CVE identification
- Implemented automated crawl and attack-surface enumeration workflows with scoped target handling and service fingerprinting
- Designed CI/CD- and Docker-compatible execution paths for portable security testing and automation workflows
- Built multi-format reporting outputs (JSON, Markdown, PDF, HTML) for remediation tracking and operational analysis
- Structured the platform around extensible orchestration to support future offensive security and monitoring modules

EDUCATION

Western Governors University

B.S. Cybersecurity and Information Assurance

In Progress - Started January 2026

Des Moines Area Community College

A.A.S. Information Technology - Network Administration

Graduated May 2016
